The Periodic Table Of Elements Coloring Book

Synopsis

A brilliant coloring book to familiarize children up to middle school with the Primary (first 5 rows) elements in the Periodic Table. Based on solid, proven concepts blending data with pictures with hands on coloring, the information sticks. By creating a foundation that is applicable to all science (â œOh yes, Hydrogen, I remember coloring it, part of water, it is also used as a fuelâ •) and creating enjoyable memories associated with the elements, science just feels easy and natural as they progress. These students will be interested in chemistry, engineering and other technical areas and will understand why those are important because they have colored those elements and what those elements do in a non-threatening environment earlier in life. But weâ™ve been told parents really enjoy all the cool facts on each element too!

Book Information

Paperback: 158 pages

Publisher: CreateSpace Independent Publishing Platform; Clr Csm edition (November 16, 2011)

Language: English

ISBN-10: 1466484292

ISBN-13: 978-1466484290

Product Dimensions: 8.5 x 0.4 x 11 inches

Shipping Weight: 1 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 starsÂ Â See all reviewsÂ (59 customer reviews)

Customer Reviews

I have been teaching my younger two kids elementary-level chemistry and my older two kids high school chemistry. I had all four of my kids color one element per day in The Periodic Table of Elements Coloring Book, and we learned a lot about each element! This chemistry coloring book has one element per page: one side lists bullet points to help us find out about that element, and the other side is a coloring page about that element. By coloring the pictures, you cement in your mind visually what each element is all about. Even though I aced my high school chemistry class years ago, I never learned all the elements so up-close like this!! I read the bulleted list for one element each day, and it took less than five minutes. While I read the page, the kids colored the coloring

page. We located each element on the Periodic Table at the front of the book, and we became familiar with each element as the days went by. The day we studied Neon, we were driving around in the car, and my 9-year-old daughter pointed to a Neon sign and shouted, "Neon! Atomic number 10! Let's find more Neon signs, Mom!" She would never have known that Neon was atomic number 10 if we hadn't studied it that day. The coloring book caused my elementary-aged daughter to become familiar with elements, and she wanted to play games trying to find those elements. She screamed with joy when she recognized the first Neon sign after having colored it in her book earlier that day. For my high school-level students, you never really get the chance to become familiar with elements like this during a chemistry course. Because my high school students had done one simple coloring page a day, they internalized the lighter and heavier elements in their minds.
